

One&Only The Palm on Palm Jumeirah Island in Dubai

Project 2010 - in United Arab Emirates

ACO. The future of drainage.

ACO External drainage solutions for a five star Hotel in Dubai.

One&Only The Palm, a Dubai luxury hotel, is located on the peninsula of one of the world's most spectacular landscapes offering an exclusive and secluded enclave of impeccable style. Amidst lush manicured gardens, fountains and pools along the sparkling shore, guests can enjoy the true beauty of the resort. The project is built on the final frond of the Palm, but its location was not a challenge for the contractors or architects due to the Palm's relatively high quality road network. The hotel is linked to the mainland Royal Mirage via boat. The hotel was finally completed in 2010, and has been operating at 85% capacity since opening. The project has 100 rooms, split between individual villas, mansions and a manor house, and overlooks the Royal Mirage's other beachfront hotel.
